

**OPERATING INSTRUCTIONS FOR MODEL 50110-G-01
PULSE RELAY**

SPECIFICATIONS:

High torque 10-rpm synchronous gear motor rated for 115v, 60 cycle, and 4-point cam for 40 cycles per minute. Phenolic enclosed snap action switch with 1 form C contact rated 15a.

OPERATION:

The timer is put in operation upon the application of external power. This operation may be continuous so long as the power is applied. The switching elements are SPDT snap-action switches, which provide flexibility for either normally ON or normally OFF control of the local circuits.
